

Frontend practice, presented as real work.

I am Phakin Chawanpunya, building a learning-forward portfolio with static HTML pages, responsive CSS, clear project context, and source links reviewers can inspect.

1

public portfolio with
screenshots and source links

Junior frontend direction with practical page craft.

This resume is intentionally tied to the portfolio. Each listed skill points back to visible work, live pages, and source files.

Role Target

Frontend intern, junior frontend role, landing page practice reviewer, or web design practice where layout, responsive behavior, UI polish, and source transparency matter.

frontend intern

landing pages

dashboard UI

Contact

Based in Thailand and open to feedback, reviews, internships, and frontend opportunities.

Practiced skills with proof on the page.

The work is static, but the presentation is treated like a real portfolio system: metadata, responsive QA, screenshots, and clear navigation.

Working Style

I practice by turning each HTML file into something someone can actually open, understand, inspect, and review without needing extra explanation.

— selected work

Projects that show the range.

These pages show both product thinking and visual presentation, with live links and source files.

InternTrack Case Study

Internship tracker, pipeline clarity, interview prep, follow-up rhythm.

LaunchLedger Case Study

Startup budget dashboard, runway visibility, decision queue.

PulseBoard

Event operations dashboard for live room status and team ownership.

— practice path

What this portfolio is built to show.

Structure

Build standalone pages with clear semantic sections and enough metadata to share professionally.

Responsive polish

Check mobile and desktop layouts for no clipped nav text, no horizontal overflow, and readable content.

Reviewer context

Add screenshots, source links, case studies, and resume material so visitors understand the work quickly.
